Report PDF - A Technical Foundation - Menswear Pattern ...
Although there are brands and individual pieces with colors and pattern, most people associate darker, more muted shades with the techwear vibe. Since most of the fabrics are highly technical, there is typically a lack of strong branding in the pieces, and most opt for a streamlined, slim look that is both functional and stylish.

Techwear: What It Is and Techwear Brands to Know | Grailed
Pattern Making' for women and for menswear. I have the one on women's styles, and fnd it's my main go-to book on pattern making. There are also books for amateurs who want a relatively painless introduction. Some are listed in my post on my favourite books on pattern drafting

A Technical Foundation, Menswear Pattern Cutting is the third publication by Tanya Dove and compliments her previous works; A Technical Foundation, Women's Wear Pattern Cutting and Concept to Creation: The Design Process.The aim of A Technical Foundation is to provide a clear flexible guide to pattern cutting for menswear. It provides detailed construction information for garment blocks and components that are used to produce well cut designs for men.The book is written for students and fashion designers to explore their own creativity in their approach to men's garment creation. It shows clear detailed illustrations and technical construction information, showing adaption of blocks in colour for easy use. With each garment and component in different chapters A Technical Foundation has been designed in a way for the designers to evolve through the book reaching a level of understanding and practice, to then have the technical skills to design their own collections.The pattern block construction throughout this book is for the modern man, using up to date methodology of creation for a young slim figure. Men are now far more conscious of their body and the clothes they wear, with a greater confidence in maintaining a well-groomed appearance now defines what it is to be 'a man' in today's society. The acceptance and changing shapes and styles in menswear is becoming as important as women's wear.Tanya Dove was Educated at Central Saint Martins in London, UK, and has over 20 years experience in fashion design. She has worked in London and Asia, and has a global perspective of the fashion industry. She now dedicates her passion for the industry in guiding the next generation of fashion designers as a fashion design educator and author.A Technical Foundation has evolved from her years of experience in industry and education, and the passion she has for fashion design and creation.

Patternmaking for Contemporary Menswear is the most current, comprehensive and user-friendly book for men's patternmaking--an essential resource for students, educators, and industry professionals.

An introduction to menswear fashion that considers a range of social and historical contexts that have served to define and redefine menswear through the ages.

A Technical Foundation is a women's wear pattern-cutting guide for all fashion designers. From aspiring students, to a fashion design lecturer's reference material, and designers alike. It provides detailed construction information for garment blocks that are used within fashion design. A Technical Foundation is divided into twenty-one chapters of garment blocks, components and finishing used in garment construction. Each chapter has detailed information and clear technical pictures showing how to construct the different garment blocks and components and take them to plans and patterns. Covering a multitude of blocks for each garment, A Technical Foundation makes adapting different blocks into individual designs that much easier. Tanya is a highly experienced fashion designer with over 20 years of experience in the fashion industry and fashion education. She has been making her own clothes since she was 12 years old and is extremely experienced in pattern making and garment creation.

Tailored Fashion Design provides students with inspiration and guidance to make their own patterns for tailored jackets, which they will then execute using contemporary tailoring techniques that the book will also outline.

Since the first edition of Metric Pattern Cutting was published in 1975 to provide a straightforward introduction to flat pattern cutting, it has become the established textbook on the subject. The fourth edition continues to offer an introduction to the basic principles of pattern cutting, with a range of good basic blocks and examples of their application to garments. The original blocks and many of the pattern adaptations have therefore been retained. However, the great expansion of casual wear, cut in jersey or stretch fabrics, has led to the growth of 'flat cutting' with no darting to create the shape and this edition devotes a whole section to this type of cutting. The sections on computer-aided design and grading have been updated. The size charts of body measurements have been revised, reflecting the changing shape of women's bodies. Fashion designers are presented with a range of methods and concepts for pattern cutting are presented, the main body of these methods, both traditional and contemporary, is predominately based on a theoretical approximation of the body that is derived from horizontal and vertical measurements of the body in an upright position: the tailoring matrix. As a consequence, there is a lack of interactive and dynamic qualities in methods connected to this paradigm of garment construction, from both expressional and functional perspectives. This work proposes and explores an alternative paradigm for pattern cutting that includes a new theoretical approximation of the body as well as a more kinetic method for garment construction that, unlike the prevalent theory and its related methods, takes as its point of origin the interaction between the anisotropic fabric and the biomechanical structure of the body. As such, the research conducted here is basic research, aiming to identify fundamental principles for garment construction. Based on some key principles found in the works of Genevieve Sevin-Doering and in pre-tailoring methods for constructing garments, the proposed theory for - and method of - garment construction was developed through concrete experiments by cutting and draping fabrics on live models. Instead of a static matrix of a non-moving body, the result is a kinetic construction theory of the body that is comprised of balance directions and key biomechanical points, along with an alternative draping method for dressmaking. This methodology challenges the fundamental relationship between dress, garment construction, and the body, working from the body outward, as opposed to the methods that are based on the prevalent paradigm of the tailoring matrix, which work from the outside toward the body. This alternative theory for understanding the body and the proposed method of working allows for diverse expressions and enhanced functional possibilities in dress.

A Technical Foundation is a women's wear pattern-cutting guide for all fashion. From aspiring students, to a fashion design lecturer's reference material, and designers alike. It provides detailed onstruction information for garment blocks that are used within fashion design. A technical Foundation is divided into twenty-one chapters of garment blocks, components and finishing used in garment construction. Each chapter has detailed information and clear technical pictures showing how to construct the different garment blocks and components and take them to plans and patterns. Covering a multitude of blocks for each garment, A Technical Foundation makes adapting different blocks into individual designs that much easier.

Provides guidelines and advice on starting points for fashion designers of all levels, including defining and rendering concepts, understanding textiles, developing sewing skills, and building an audience.

Written as a beginning-level patternmaking text, Principles of Flat Pattern Design 4th Edition provides an added dimension to apparel design and a better understanding of the processes involved in producing ready-to-wear or custom apparel.
