This book contains the knowledge an interaction designer should know about pervasive design for

sustainability. Relevant design research is discussed and framed in a story and value based participatory approach. Sustainability is the most important design goal. This is the first message. A second message is that information technologies, and in particular pervasive computing are

invaluable keys in the quest for sustainability. Thirdly there is a lack of knowledge on sustainability issues in the interaction design community. In this book a unique meta-level framework structures an extensive discussion of design for sustainability. The framework is based on a principle

Services and products are increasingly composed of interconnected computerized things with embedded

Design needs to include all of the above while, importantly, also taking the particular context of use into account. This book presents a framework and a number of tools from
