in conjugated polymers often leads to nonplanar main chains as a consequence of high steric hindrance at the linking point. Herein, we report the synthesis of a ladderized anthanthrene unit using an  $sp^3$  carbon bridge. Three conjugated copolymers with fluorene, isoindigo, and bithiophene derivatives have been synthesized and characterized

that are interconnected, leading to a hexagonal network of  $sp^2$ -hybridized carbon atoms. 8

Graphene is semimetallic in nature with zero band gap and high charge carrier mobility. 9 Therefore, structurally defined 2D CPs with  $\pi$ -electron delocalization in two dimensions are expected to offer highly desirable properties for organic optoelectronics, such as an ideal band structure for ...

semiconducting properties and promising applications in organic optoelectronics. To date, the extension of linear conjugated polymers into two-dimensional conjugated polymers (2D CPs), which can also be regarded as 2D  $\pi$ -conjugated covalent organic frameworks (COFs), remains largely unexplored due to limited synthetic methodologies.

## Stacked Polymers And Molecules Theory Synthesis And Properties

Conjugated polymers have attracted broad academic and industrial interest for various optoelectronic applications. Conjugated polymers possess obvious advantages toward inorganic materials and small-molecule organic materials, such as light weight, low cost, and flexibility. Furthermore, most polymer materials are soluble in common solvents thus polymer films can be prepared through solution process and printing, such as spin-coating, ink-jet and roll-to-roll, which is a critical issue for ...
