Cyanotype

The Cyanotype is an alternative (non-silver) photographic process. It is also known as a blueprint and is considered among the easiest of all the historical methods. This is why it is ideal for beginners to start with and schools, colleges to teach.

Cyanotype kits, supplies and UV Lamps

Cyanotypeis a photographic printing processthat produces a cyan-blueprint. Engineers used the process well into the 20th century as a simple and low-cost process to produce copies of drawings, referred to as blueprints. The process uses two chemicals: ferric ammonium citrateand potassium ferricyanide.

Cyanotype - Wikipedia

Unlike photographs set in silver, like in black and white photography, cyanotypes are using a solution of iron compounds. The photograph can be taken with a camera, like a digital camera, and the resulting photo turned into a negative that can be used to make a cyanotype.

Cyanotype - the classic process - AlternativePhotography.com

Based on the classic formula these cyanotype sets will produce beautiful blue prints. They come in the form of two pre-mixed solutions. Just mix equal amounts of the two (A and B) solutions, coat your material, let it dry and expose in the sun or under uv light. You will need approximately 2ml (1 teaspoon) to coat an A4 size paper.

Cyanotype solution 100ml, 300ml and 800ml

Cyanotype is a really nifty photo printing process that was initially used as a low-cost process to duplicate things such as maps or most commonly blueprint. With the advent of low-cost printing, this method has become redundant now and used almost exclusively to make art. So let's jump right into it.

Cyanotype- Indigo Sun Printing : 5 Steps (with Pictures ...

The cyanotype process uses a mixture of iron compounds, which when exposed to UV light and washed in water oxidise to create Prussian Blue images. The technique was invented in 1841 by Sir JohnHerschel and was popularised by photographer and botanist Anna Atkins.

How To Make Cyanotypes - Parallax Photographic Coop

Cyanotype is an old monochrome photographic printing process which gives a cyan-blue print. The English scientist and astronomer Sir John Herschel discovered this procedure in 1842. Though Herschel is perhaps the inventor of the cyanotype process, it was Anna Atkins, a British scientist, who brought the process into the realm of photography.
