Bitcoin ha fatto emergere un nuovo territorio da esplorare in cui la parola chiave è blockchain. Nell'intersezione unica fra finanza, economia, tecnologia, matematica e diritto si sta plasmando un mondo che è ancora praticamente sconosciuto ai più. Oltre ad abilitare pagamenti senza l'intermediazione delle banche, la blockchain diventa la piattaforma su cui implementare servizi più articolati e complessi come gli smart contract. Se Bitcoin ha introdotto il concetto di criptomoneta, gli smart contract introducono l'idea di denaro programmabile. Non tanto un software che gestisce denaro quindi, ma piuttosto un denaro che contiene il suo software. Anche la finanza si sta trasformando per accogliere queste innovazioni. Negli ultimi due anni decine di startup hanno ottenuto finanziamenti attraverso una ICO, cioè una "Initial Coin Offering". In questo modo ogni organizzazione può in pratica battere la sua moneta. Un territorio nuovo e pieno di ramificazioni legali, ma dagli sviluppi interessanti e in qualche modo inevitabili. L'autore: Davide Carboni è un esperto di tecnologia e nel corso della sua carriera ha collaborato con importanti aziende ed istituzioni internazionali e nazionali tra i quali Intel, Imperial College, CRS4 e Tiscali

Il volume contiene contributi di docenti e ricercatori di varie Università italiane su una pluralità di tematiche che sollecitano la riflessione circa la tenuta delle categorie tradizionali del diritto privato a cospetto delle trasformazioni dei modelli di relazione tra i privati recate dalle tecnologie digitali. Gli scritti sono maturati nel contesto delle attività di ricerca e seminariali promosse dall ' Osservatorio Giuridico sulla Innovazione Digitale (OGID), costituito presso il Dipartimento di Diritto ed economia delle attività produttive dell ' Università Sapienza di Roma.

Le nuove tecnologie sono ormai entrate prepotentemente nelle dinamiche finanziarie, rimodulando, e talvolta sovvertendo, gli schemi relazionali tradizionali e proponendo nuove forme di business, nuove strategie e nuove sfide: le criptovalute, la robo-consulenza, i mobile-payments, il crowdfunding e molte altre sono realtà già profondamente diffuse nell ' economia finanziaria, che si fondano sulle innovazioni radicali offerte dalle tecnologie blockchain, dall ' intelligenza artificiale e dal machine learning. L ' impatto di tali innovazioni è straordinario anche sul sistema normativo, nazionale ed europeo, che presiede al corretto andamento dei mercati e alla tutela delle imprese e degli investitori. Il volume offre il più ampio e completo approfondimento oggi possibile su ciascuna delle tematiche giuridiche investite dal fenomeno Fintech, sia sotto il profilo dell ' analisi teorica, che dal punto di vista della considerazione della prassi giurisprudenziale e degli orientamenti delle Authorities e con una ricca presentazione del quadro internazionale.

Redefining Eclecticism in Early Modern Bolognese Painting. Ideology, Practice, and Criticism focuses on the unique nature of early modern Bolognese painting that found its expression in stylistic diversity. The flourishing of different stylistic approaches in the Mannerist paintings of the previous generation evolved, at the turn the seventeenth century, in the work of the Bolognese painters into an approach best described as eclecticism, characterized by the combination of two or more styles in a single work of art. Eclecticism was a major innovation and major contribution to the history of art. But it then also became a critical term that suffered much negative press. The book therefore also traces the role of eclecticism as a concept in the evolution of criticism and scholarship about the Bolognese school of painting over 250 years, showing how the dramatically vacillating attitudes towards this concept shaped the historical view of the Bolognese painters, ultimately having a tremendous dampening impact on our understanding of seventeenth-century art.
