The Answer Is Energy provides thirty chapters of guidance and stories that reveal how to shift energy and reframe thinking about family, money, relationships, abundance, and control to live in the moment of now. When someone's energy is in alignment with their true intention of being healthier, happier, and more productive, great empowerment and life changing transformation occurs. On this thirty-day journey, Jarrad Hewett, a multi-dimensional energy expert, shows readers how energy creates with thoughts, feelings, and beliefs. He teaches readers how to quickly shift into a paradigm of ease, bliss, love, abundance, and tranquility. The Answer is Energy helps readers to seize their best life by showing them how to not let their inner programming and the worn-out stories of their past crowd out their dreams and aspirations. People are continually looking for solutions "out there" and forget that they have all the magnificent resources and tools inside themselves to catapult their life into the stratosphere by tapping into their own abundant source of energy.

^Energy and Life addresses the subject of energy in biological systems. It concentrates on the way in which energy flow through plants, animals and bacteria drives the primary processes of life such as metabolism, movement and ion transport. It deals with living systems from a whole-body approach, for example in starvation and obesity, to the cellular and molecular level where modern advances in biochemistry and molecular biology are revolutionising our knowledge of how "molecular machines" work. Extensive illustrations, concept boxes, summary sections, suggested further reading lists, as well as questions and answers aid with the presentation of a sometimes daunting, yet fascinating, area of biological science.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Jay Phelan's What is Life? A Guide to Biology is written in a delightfully readable style that communicates complex ideas to non-biology majors in a clear and approachable manner. After reading Phelan's book, students will understand why they would want to know and talk about science. His skillful style includes asking stimulating questions (called Q questions) which encourage the student to keep reading to find the answer and will illuminate just how relevant science is to their life.

Vols. 2 and 5 include appendices.

This life we all live is like a video game, though we don't realize it. We are so focused on living day to day we never stop, or think about what this type of life is doing to our body and mind. Do you want to calm your mind, heal your body and supercharge your brain? Most people don't realize that's exactly what Reiki does to your system. And that is the precise thing the majority of the world's population needs. We aren't living, we're just surviving.
