Fire service manual : volume 2; fire service operations - electricity.. [Great Britain.

Incidents involving rescue from road vehicles are dramatically increasing in frequency. There are some 3500 deaths on the road each year, with 35,000 serious injuries. Modern motor vehicles are becoming safer for occupants, due to advancement in technology, so persons are more likely to survive high impact speeds, but are also more likely to become entrapped. The Fire and Rescue Service, as the primary rescue service, requires national guidance to ensure a similar standard of response anywhere in the UK. This manual is designed to highlight current best practice with regard to vehicle rescue techniques and first responder trauma care. Each chapter forms an independent reference source, but the publication as a whole forms a complete guide. Chapters cover: vehicle design and construction; dealing with incidents; safety procedures; operational procedures; extrication equipment; medical considerations and trauma care; Integrated Personal Development System (I.P.D.S.). Appendices cover: Highways Agency/Fire and Rescue Service memorandum of understanding; training and general information; and emergency services personnel (ESP) aide m moire. The CD-ROM, "Vehicle extrication techniques", is a multi media guide to rescue tool handling and extrication techniques.

Incident command systems are vital for managing risk within fire brigades. This new and updated edition of 'Incident Command: Fire and Rescue Service Manual - Volume 2: Fire Service Operations' develops the subject,

particularly in the area of dynamic risk assessment and command competence. This guide details the doctrine of the Fire and Rescue Service (FRS) in the context of operational incident management, leadership, and the functional command and control processes that flow from it. This new edition of the manual also reflects the need for Fire and Rescue Services to be able to work effectively within a broader multi-agency incident management framework. Further to recent legislation this publication offers guidance in respect to the increasingly broad role of Fire and Rescue Services in incidents other than fire. This role is then considered in relation to the capacities, objectives, and constraints of other responding agencies. Essential reading for Fire Brigade Service managers and those involved in incident response across all of the emergency services.

The Fire and Rescue Service Operational Guidance - Aircraft Incidents provides a consistent approach that forms the basis for common operational practices. It supports interoperability between fire and rescue services, other emergency responders, the aviation industry and other groups. This guidance covers a wide range of incident types that Fire and Rescue Services are likely to encounter in relation to aircraft. It is applicable to any event regardless of scale, from small incidents, such as an accident involving a microlight, to a large incident involving a civil aircraft (e.g. Airbus A380) resulting in a large scale major incident. It covers the time period from the receipt of the first emergency call to the closure of the incident by the Fire and Rescue Service Incident Commander. Whilst this guidance may be of use to a number of other agencies, it is mainly for the UK Fire and Rescue Service. In addition to detailed tactical and technical information it also outlines the key operational and strategic responsibilities and considerations that need to be taken into account to enable the Fire and Rescue Service to train, test intervention strategies and plan to ensure effective response at an aircraft incident

This Fire and Rescue Manual is the first manual within the Fire Service Operations series dedicated to the protection of the environment. This publication provides information and guidance designed to support firefighters, Fire Brigade Service managers and trainers in their work at operational incidents, training events and during day-to-day activities. This manual contains guidance for Fire and Rescue Services (FRSs) on preventing and if necessary, dealing with incidents with the potential to pollute. Through its guidance this manual also ensures FRSs can help minimise their own impact on the environment by providing advice on how to prevent pollution from their own premises. This new Fire and Rescue Service manual is essential reading for Fire and Rescue Service managers and those involved in incident response across all of the emergency services.

PDF version of 1998 print publication (ISBN 9780113411863) which superseded Manual of firemanship Book 3 Part 3 "Hand pumps extinguishers & foam equipment" (ISBN 0113406266) & Dear Chief Officer Letter 2/97 - Foam application rates

This document provides guidance to the chief fire officers/firemasters and brigade training officers/training providers in the safe and effective delivery of compartment fire behaviour training (CFBT). It provides a step by step guide to the process of ensuring that CFBT properly addresses identified training needs and delivers appropriate training with due regard to the safety of trainees, trainers and others involved in training delivery.
