Design - Dan Robinson ...

Structured programming is a programming paradigm aimed at improving the clarity, quality, and development time of a computer program by making extensive use of the structured control flow constructs of selection (if/then/else) and repetition (while and for), block structures, and subroutines in contrast to using simple tests and jumps such as the go to statement, which can lead to “ spaghetti code ” that is potentially difficult to follow and maintain.

Fundamentals Of Structured Program Design

Program design consists of the steps a programmer should do before they start coding the program in a specific language. These steps when properly documented will make the completed program easier for other programmers to maintain in the future. There are three broad areas of activity: Understanding the Program; Using Design Tools to Create a Model; Develop Test Data
