Head, Face, and Neck Trauma: Comprehensive Management ...

Penetrating trauma is an injury that occurs when an object pierces the skin and enters a tissue of the body, creating an open wound. (In blunt, or non-penetrating trauma, there may be an impact, but the skin is not necessarily broken.) The penetrating object may remain in the tissues, come back out the way it entered, or pass through the tissues and exit from another area.

Penetrating trauma - Wikipedia

A head injury is any sort of injury to your brain, skull, or scalp. This can range from a mild bump or bruise to a traumatic brain injury. Common head injuries include concussions, skull fractures,...

Head Injury: Types, Causes, and Symptoms

Acute penetrating injuries to the head and neck continue to induce considerable anxiety for most clinicians. This reality is founded in an appropriate concern for both airway control and neurologic injury, as well as in limited clinician experience in most centres. The focus of this article is to deliver a concise and efficient diagnostic and initial management plan for patients with penetrating injuries to the head and neck.
