Language interference (also known as L1 interference, linguistic interference, cross-linguistic interference or transfer) is the effect of language learners' first language on their production of the language they are learning. The effect can be on any aspect of language: grammar, vocabulary, accent, spelling and so on.

Language interference | Psychology Wiki | Fandom

When the relevant unit or structure of both languages is the same, linguistic interference can result in correct language production called positive transfer. For example, Spanish speakers learning English may say " Is raining " rather than " It is raining " , leaving out the subject of the sentence.

Language Transfer: Positive or Negative? - EnglishPost.org

Language transfer (also known as L1 interference, linguistic interference, and crosslinguistic influence) is most commonly discussed in the context of English language learning and teaching, but it can occur in any situation when someone does not have a native-level command of a language, as when translating into a second language.

Language transfer - Wikipedia

When one has good command over the two languages (i.e.) his own mother tongue and second language (here it is English), there is no interference. In the case of subordinate bilingualism, the second language is not mastered, the mother tongue dominates and influences the second language and leads to interference. Each language has its own entity.
