Understand the relationship between the slopes of parallel and perpendicular lines and in particular, to help identify students who find it difficult to:

- Find, from their equations, lines that are parallel and perpendicular.
- Identify and use intercepts.

*Lesson 19: Parallel and
Perpendicular Lines*

Since slope is a measure of the angle of a line from the horizontal, and since parallel lines must have the same angle, then parallel lines have the same slope — and lines with the same slope are parallel.

Perpendicular lines are a bit more complicated.
