Change and Challenge: My Life After Thirty is the sequel of Chance and Choice, My First Thirty Years (2007). It describes the birth of the author's two sons in the 1950s and the change from her life as a London research biologist to motherhood in rural England. After emigrating to Birmingham, Alabama Joan faced the challenge of raising her sons in a segregated society. In 1963 the Staple family moved to Buffalo, NY; here Joan resumed her research, which involved the 'creation' of living amoebas, as well as witnessing the evolution of a new amoeba strain. Coping with teenagers in the Sixties and starting her teaching career at a Jesuit college complete the story.

Everyone wonders what tomorrow holds, but what will the real future look like? Not decades or even hundreds of years from now, but thousands or millions of years into the future. Will our species change radically? Or will we become builders of the next dominant intelligence on Earth- the machine? These and other seemingly fantastic scenarios are the very possible realities explored in Peter Ward's Future

Evolution, a penetrating look at what might come next in the history of the planet. Looking to the past for clues about the future, Ward describes how the main catalyst for evolutionary change has historically been mass extinction. While many scientist direly predict that humanity will eventually create such a situation, Ward argues that one is already well underway--the extinction of large mammals--and that a new Age of Humanity is coming that will radically revise the diversity of life on Earth. Finally, Ward examines the question of human extinction and reaches the startling conclusion that the likeliest scenario is not our imminent demise but long term survival--perhaps reaching as far as the death of the Sun! Full of Alexis Rockman's breathtaking color images of what animals, plants and other organisms might look like thousands and millions of years from now, Future Evolution takes readers on an incredible journey through time from the deep past into the far future.

Wanting to provide an insider's view of the rewards and difficulties of a medical career, Dr. Leonard Laster (physician, researcher, teacher, and columnist) interviewed 32 physicians to learn how their careers developed. We encounter a cornucopia of commonalities that have directed their professional lives. One became a physician to homeless people, another the CEO of a major pharmaceutical corporation, another a family physician after overcoming the barriers of racial prejudice, another the Surgeon General, another a state governor, and yet another the editor of one of the world's most prestigious medical journals. Life After Medical School contains reflections by training program directors on which person fits which path. Dr. Laster wisely pays much attention to whether it is more rewarding to be a generalist or a specialist. The storytellers conjure truthful portraits of their personal and professional lives as generalists. This personal career guide is of special appeal to parents and mentors of young people considering a career in medicine, to premedical and medical students, to residents-in-training, and to midcareer physicians. The book is also a treat to general readers in search of a frank and sensitive account of the nature of professionalism in medicine and what it means to be a doctor in today's swiftly changing world.

In 1981 St Martin's Press published After Man, the first edition of palaeontologist Dougal Dixon's vision of an 'alternative evolution': one without mankind. To some, this was seen as sacrilege, but Dixon himself only ever saw the decision to obliterate his own species from his vision as a practical one.

Dispatch's Best Nonfiction Books of 2005 • One of Amazon.com's Best Science Books of 2005 A radical and optimistic view of the future course of human development from the bestselling author of How to Create a Mind and The Singularity is Nearer who Bill Gates calls "the best person I know at predicting the future of artificial intelligence" For over three decades, Ray Kurzweil has been one of the most respected and provocative advocates of the role of technology in our future. In his classic The Age of Spiritual Machines, he argued that computers would soon rival the full range of human intelligence at its best. Now he examines the next step in this inexorable evolutionary process: the union of human and machine, in which the knowledge and skills embedded in our brains will be combined with the vastly greater capacity, speed, and knowledge-sharing ability of our creations.

This book discusses the big questions about how the discovery of extraterrestrial life, whether intelligent or microbial, would impact society and humankind.

This Is My Father's World critically engages contemporary environmental ethics and provides Christians with a theological foundation for appropriately relating to the world they call God's creation--a creation ethic. It is refreshingly and thoroughly scriptural. However, what the Bible says may shock people with conservative or liberal presuppositions already in mind. This book is a challenge to both sides of the debate.
