Solar systems begin in the dust and gas clouds found in between the stars. The dust is composed of elements like iron and carbon. The gas is hydrogen and helium. These dusty clouds are called nebulae. Here these particles start to come together to form planets. Read More... Science Worksheets and Study Guides Seventh Grade.

Our Solar System. Science Worksheets and Study Guides ...

These magnetospheres rotate with the planet, sweeping charged particles with them. The Sun has a magnetic field, the heliosphere, which envelops our solar system. The planets orbit the Sun. The Sun. The Sun is the only body in our solar system that gives out a light of its own. The Sun is more than 100 times wider than the Earth.

Solar System Study Guide - summaryplanet.com

Our planetary system is named the "solar" system because our Sun is named Sol, after the Latin word for Sun, "solis," and anything related to the Sun we call "solar." Our planetary system is located in an outer spiral arm of the Milky Way galaxy. Our solar system consists of our star, the Sun, and everything bound to it by gravity — the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune, dwarf planets such as Pluto, dozens of moons and millions of asteroids, comets ...

Our Solar System Study Guide - peugeotocm.com

When we just had our own solar system ' s 8 planets to study, we had a limited view of what kind of planetary systems are possible in the cosmos. Now, with over 4,000 exoplanets cataloged, the horizons of planetary science are broader than ever. We also sometimes get to see other solar systems forming, which teaches us about our own origins. It's like watching our very own "How It's Made" show through the world's telescopes.
