Over the past three decades the Professional Service Firm (PSF) sector has emerged as one of the most rapidly growing, profitable, and significant in the global economy. In 2013 the accountancy, management consulting, legal, and architectural sectors alone generated revenues of US\$ 1.6 trillion and employed 14 million people. PSFs play an important role in developing human capital, creating innovative business services, reshaping government institutions, establishing and interpreting the rules of financial markets, and setting legal, accounting and other professional standards. The study of PSFs can offer insights into the contemporary challenges facing organizations within the knowledge economy, and deepen understanding of more conventional organizations. Despite their significance, however, PSFs have until recently remained very much in the shadows of organizational and management research. The Oxford Handbook of Professional Service Firms marks the coming of age of PSF scholarship with a comprehensive and integrative exploration of current research and thinking on PSFs, featuring contributions from internationally renowned scholars in the fields of organizational and management studies. It is divided into three distinct sections - the professions, the firms, and the professionals that work within them - and covers subjects from governance and leadership to regulation, entrepreneurship, and diversity. Bringing together a broad range of empirical and theoretical perspectives, the Handbook offers many potentially important insights into the contemporary challenges of organizations in the knowledge economy and suggests new lines of inquiry that may shed further light on the activities and performance of PSFs and the professionals who work within them.

"This book discusses the economic impacts of outsourcing and off shoring to the developing countries and developed countries and the short term and long term implications"--Provided by publisher.

Companies are increasingly asking which of their value chain activities are best performed within their own company and which may be outsourced. In addition, they are also considering which pieces of their value chain may be better performed abroad. These interrelated decisions concerning outsourcing and offshoring have not only changed entire industries, they have also transformed the lives of people across the world. Hundreds of millions of jobs in emerging nations have been the direct result of outsourcing and offshoring decisions. At the same time, many people in the developed world have lost their jobs because a company has been able to find a cheaper alternative. Featuring contributions from scholars in eleven different countries, this book was the first to examine the theory and practice of outsourcing and offshoring simultaneously. It includes studies of a variety of different industries, including pharmaceuticals, automobiles, medical records, appliances, human resource management and telecommunications.
