The Sample Preparation Techniques for Environmental, Plant, and Animal Samples handbook is a collection of best practices, recipes and theoretical information aimed at anyone who works with any type of molecular biology, proteomics, or metabolomics research involving diffi cult and tough-to-process samples, and thus is exposed to the seemingly unbreakable bottleneck of sample preparation. Th is book is most useful to researchers preparing nucleic acids and proteins from environmental (e.g., soil, marine, and wastewater, feces) and tough microbiological (e.g., spores, yeasts, gram positive bacteria) samples, as well as solid tissue samples from plants and animals. This book is the first comprehensive piece of literature dealing with applications of bead beating technology and other types of mechanical homogenization sample preparation.

Language and food are universal to humankind. Language accomplishes more than a pure exchange of information, and food caters for more than mere subsistence. Both represent crucial sites for socialization, identity construction, and the everyday fabrication and perception of the world as a meaningful, orderly place. This volume on Culinary Linguistics contains an introduction to the study of food and an extensive overview of the literature focusing on its role in interplay with language. It is the only publication fathoming the field of food and food-related studies from a linguistic perspective. The research articles assembled here encompass a number of linguistic fields, ranging from historical and ethnographic approaches to literary studies, the teaching of English as a foreign language, psycholinguistics, and the study of computer-mediated communication, making this volume compulsory reading for anyone interested in genres of food discourse and the linguistic connection between food and culture. Now Open Access as part of the Knowledge Unlatched 2017 Backlist Collection.

Sheds light on the history of food, cooking, and eating. This collection of essays investigates the connections between food studies and women's studies. From women in colonial India to Armenian American

feminists, these essays show how food has served as a means to assert independence and personal identity.

New materials enable advances in engineering design. This book describes a procedure for material selection in mechanical design, allowing the most suitable materials for a given application to be identified from the full range of materials and section shapes available. A novel approach is adopted not found elsewhere. Materials are introduced through their properties; materials selection charts (a new development) capture the important features of all materials, allowing rapid retrieval of information and application of selection techniques. Merit indices, combined with charts, allow optimisation of the materials selection process. Sources of material property data are reviewed and approaches to their use are given. Material processing and its influence on the design are discussed. The book closes with chapters on aesthetics and industrial design. Case studies are developed as a method of illustrating the procedure and as a way of developing the ideas further.

Open access edition: DOI 10.6069/9780295748733 Dominica, a place once described as "Nature's Island," was rich in biodiversity and seemingly abundant water, but in the eighteenth century a brief, failed attempt by colonial administrators to replace

cultivation of varied plant species with sugarcane caused widespread ecological and social disruption. Illustrating how deeply intertwined plantation slavery was with the environmental devastation it caused, *Mapping Water in Dominica* situates the social lives of eighteenth-century enslaved laborers in the natural history of two Dominican enclaves. Mark Hauser draws on archaeological and archival history from Dominica to reconstruct the changing ways that enslaved people interacted with water and exposes crucial pieces of Dominica's colonial history that have been omitted from official documents. The archaeological record—which preserves traces of slave households, waterways, boiling houses, mills, and vessels for storing water—reveals changes in political authority and in how social relations were mediated through the environment. Plantation monoculture, which depended on both slavery and an abundant supply of water, worked through the environment to create predicaments around scarcity, mobility, and belonging whose resolution was a matter of life and death. In following the vestiges of these struggles, this investigation documents a valuable example of an environmental challenge centered around insufficient water. *Mapping Water in Dominica* is available in an open access edition through the Sustainable History Monograph Pilot, thanks to the generous support of the Andrew W. Mellon

Foundation and Northwestern University Libraries.

This book is a study of three iatrosophia (the notebooks of traditional healers) from the Ottoman and modern periods of Greece. The main text is a collection of the medical recipes of the monk Gymnasios Lauriōtis (b. 1858). Gymnasios had a working knowledge of over 2,000 plants and their use in medical treatments. Two earlier iatrosophia are used for parallels for Gymnasios's recipes. One was written c. 1800 by a practical doctor near Khania, Crete, and illustrated by a second hand. The second iatrosophion dates to the sixteenth century; ascribed to a Meletios, the text survives in the Codex Vindobonensis gr. med. 53. The contents of these and other iatrosophia are predominantly medical, with many of the remedies taken from folk medicine, classical and Hellenistic pharmacological writers, and Galen. The book opens with a biography of the monk Gymnasios and his recipes and then a description of the Cretan and Meletios iatrosophia. The iatrosophia, their role in Greek medical history, and the methods of healing are the subject of chapter 2. The Greek text of Gymnasios's recipes are accompanied by a facing English translation. A commentary offers for each of Gymnasios's recipes passages (translated into English) from the two other iatrosophia to serve as parallels, as well as an analysis of the pharmacopoeia

in the medical texts. The book concludes with Greek and English indices of the material medica (plants, mineral, and animal substances) and the diseases, and then a general index.

This book discusses contamination of water, air, and soil media. The book covers health effects of such contamination and discusses remedial measures to improve the situation. Contributions by experts provide a comprehensive discussion on the latest developments in the detection and analysis of contaminants, enabling researchers to understand the evolution of these pollutants in real time and develop more accurate source apportionment of these pollutants. The contents of this book will be of interest to researchers, professionals, and policy makers alike.
