The common denominator of a growing number of hard decisions facing modern societies is the need to determine 'how safe is safe enough?'. The authors begin by defining acceptable-risk problems and analysing why they are so difficult to resolve, considering such issues as uncertainty about their definition, lack of relevant facts, conflicting and conflicted social values, and disagreements between technical experts and the lay public. Drawing on their own experience in risk management as well as the relevant research literatures, they identify and characterise the variety of methods that have been proposed for resolving acceptable-risk problems. They subject these methods to a rigorous critique in terms of philosophical presuppositions, technical feasibility, political acceptability, and validity of underlying assumptions about human behaviour. The authors construct a framework for deciding how to make decisions about risks, and offer recommendations for research, public policy, and practice. Although their principal focus is on technological hazards, their analysis applies to many risks, such as those from new medical treatments or innovative programmes in criminal justice. The necessity of balancing risks and benefits impinges on most people's lives, and a broad audience will find this book thought-provoking and useful.

Cities of Oil is the first sustained historical account of the development of the early Canadian petroleum refining and manufacturing industry. In it, Timothy W. Cobban documents the industry's development in southern Ontario, from its beginnings in the 1850s to its later expansion on the outskirts of London, to Petrolia, and finally to Sarnia. He accounts for all of the industry's important developments and innovations, particularly the role played by municipalities in fostering its growth. Using extensive archival research, Cobban concludes that municipalities can stimulate the accelerated, sustained development of local industry sectors, thus challenging the dominant view that the influence of municipalities on economic growth is marginal. *Cities of Oil* demonstrates the importance of accommodating the land and infrastructure needs of industry at critical junctures, and implementing land use policies that encourage the dense clustering of industries. This book will be essential reading for those seeking a greater understanding of industrial growth in the province of Ontario.
