Click on "Save as type:" right below "File name:" and . select Log (*.log). This will create the file *.log which can be read by any word processor or by Stata (go to File - Log - View). If you save it as *.smcl (Formatted Log) only Stata can read it. It is recommended to save the log file as *.log

Getting Started in Data Analysis using Stata

Stata stores data in a proprietary format, i.e., the .dta file Once data are stored in a .dta file, we can quickly load the data into memory by the use command If data are given in other formats, we have to input / read / import them into stata first One common such format is known as a raw data file, which stata assumes to have a file extension of .raw · ·

Stata Workshop 2: Data Management - opr.princeton.edu

Stata has other commands for interacting with the operating system, including mkdir to create a directory, dir to list the names of the files in a directory, type to list their contents, copy to copy files, and erase to delete a file. You can (and probably should) do these tasks using the operating system directly, but the Stata commands may come handy if you want to write a script to perform ...
