Issue Section: Viewpoints. Prions are a class of proposed proteinaceous infectious agents that cause similar fatal brain diseases. These diseases are known as transmissible spongiform encephalopathies (TSEs), and include Creutzfeldt-Jakob disease (CJD) and Gerstmann-Straussler syndrome (GSS) in humans, bovine spongiform encephalopathy (BSE) in cattle (also variant CJD [vCJD] in humans), and scrapie in sheep.

Challenge of Prion Decontamination | Clinical Infectious ...

A prion is a type of protein that can cause disease in animals and humans by triggering normally healthy proteins in the brain to fold abnormally. The prion mode of action is very different to bacteria and viruses as they are simply proteins, devoid of any genetic material. Once a misfolded prion enters a healthy person – potentially by eating infected food – it converts correctly-folded proteins into the disease-associated form.
