of probability has its own rules, definitions, and laws, which you can use to find the probability of outcomes, events, or combinations of outcomes and events. To determine probability, you need to add or subtract, multiply or divide the probabilities of the original outcomes and

events. You use some combinations so often that they have their own rules and formulas.

Probability For Dummies Cheat Sheet - dummies
The way that you combine them depends on whether you want to know the probability of either

event, or both events (OR or AND): To work out the probability of both events (AND), you multiply the probability of one by the probability of the other. To work out the probability of either event (OR), ...

Probability does not
tell us exactly what
will happen, it is just a
guide Example: toss a
coin 100 times, how
many Heads will
come up? Probability
says that heads have
a ½ chance, so we
can expect 50 Heads.

But when we actually try it we might get 48 heads, or 55 heads... or anything really, but in most cases it will be a number near 50.
