POSIX Threads (Pthreads for short) is a standard for programming with threads, and defines a set of C types, functions and constants. More generally, threads are a way that a program can spawn concurrent units of processing that can then be delegated by the operating system to multiple processing cores. Clearly the advantage of a multithreaded program (one that uses multiple threads that are assigned to multiple processing cores) is that you can achieve big speedups, as all cores of your CPU ...
