The MicroStrategy Quick Start Guide provides an overview of the installation and evaluation process, and additional resources.

Based on their extensive experience with teaching R and statistics to applied scientists, the authors provide a beginner's guide to R. To avoid the difficulty of teaching R and statistics at the same time, statistical methods are kept to a minimum. The text covers how to download and install R, import and manage data, elementary plotting, an introduction to functions, advanced plotting, and common beginner mistakes. This book contains everything you need to know to get started with R.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

Mount Kilimanjaro is the tallest peak in Africa, rising 19,340 feet above the surrounding plains. For hundreds of years it has been called the " shining mountain " by local people. They gave it this name because the top is covered with glittering glacier ice and snow. It is one of the most beautiful mountains in the world. In recent decades local people and tourists have noticed that there is less and less ice and snow on the mountain each year. Most scientists believe that the glaciers are disappearing because of changes in the weather of eastern Africa, and because of human actions. How is the ice disappearing? Who will be affected by the loss of the glaciers? What can you do to help? These questions are answered in the pages of this book.

An excellent introductory that uses simple numerical illustrations to provide an intuitive understanding of concepts and confirm major results. Describes various methods for sample selection and estimation including unequal probability sampling and the prediction approach. The accompanying disk contains data files for cases and two computer programs--one of which is an interactive DOS program designed to serve as a tutorial by assisting the implementation of complicated sampling formulas.
