Useful for the first three years of Secondary school, this is a three book series. It provides an introduction to the world of Science and is a helpful foundation for CXC separate sciences and CXC single award Integrated Science. Written in clear English, it is suitable for a range of abilities.

The Number One course for 11-14 year-olds has now been fully revised for the new science curriculum.

Level: KS3 Subject: Science Research proves that repeated practice is more effective than repeated study, which is why this KS3 Science workbook provides plenty of practice opportunities for all Year 8 Science topics. Packed with biology, chemistry and physics practice questions, students will be able to reinforce and test their understanding of all the lessons taught in school. Not only does this science book encourage students to achieve their best possible results, but it will build confidence by ensuring fluency in all Year 8 science skills taught at Key Stage 3. For more KS3 Science study materials, try our KS3 Science All-in-One Revision and Practice (9780007562831).

As the third millennium progresses, we are faced with increasing pressures relating to climate change and the sustainability of life on Earth. Concerned citizens are realizing that the responsibility to respond is both local and global. There is an increasing sense of urgency about the need to reform the processes of schooling and curriculum to better prepare students for global citizenship. Educators, policy makers and the wider community are seeking information about how to proceed with this reform effort, particularly how alternative and integrated approaches to curriculum can be used to engage students with the important issues of our time. *Knowledge that Counts in a Global Community* explores the potential contribution of curriculum integration in a context where school curricula are typically segregated by discipline. It offers curriculum integration as a powerful tool for educating young citizens so that they can understand and respond to global concerns. It argues for an informed citizenry who can think broadly across disciplines, and contribute sensibly and pragmatically to local problems with an eye on how this translates to making a global difference. In its examination of the twin themes of global knowledge and curriculum integration, the book explores: the nature of curriculum integration the nature of knowledge the nature of learning The authors reflect on these issues from perspectives gained by more than a decade of research in the area. Their in-depth, scholarly exploration and critical analysis of current approaches to curriculum, introduces educators and academics to contemporary ways of conceptualizing the complexities of, and relationships among curriculum integration, knowledge and learning. Throughout the book, the authors emphasize the central curriculum question, what kinds of outcomes do we want for students of the twenty-first century? This book will provide a valuable resource for academic educators, researchers, teachers and others interested in educational policy reform.

Primary Exploring Science Teacher Guides provide comprehensive support for teachers and teaching assistants, saving you time and giving you a helping hand with planning.
